Validation of Surrogate Outcomes

Prentice's Criteria

SISCR - RCT, Day 2 - 2 : 1

## Choice of a Primary Outcome

### Importance of primary outcome specification

- ▶ The goal of a RCT is to find effective treatment indications
  - ▶ The primary outcome is a crucial element of the indication
- ▶ Scientific basis:
  - ▶ A clinical trial is planned to detect the effect of a treatment on some outcome
  - ▶ Statement of the outcome is a fundamental part of the scientific hypothesis
- ▶ Ethical basis:
  - ▶ Generally, subjects participating in a clinical trial are hoping that they will benefit in some way from the trial
  - ▶ Clinical endpoints are therefore of more interest than purely biological endpoints

Choice of a Primary Outcome

Clinical Endpoints  
Multiple Endpoints and Competing Risks

Validation of Surrogate Outcomes

Prentice's Criteria

SISCR - RCT, Day 2 - 2 : 2

## Choice of a Primary Outcome

### Multiple comparison issues

- ▶ Type I error for each endpoint
  - ▶ In absence of treatment effect, will still decide a benefit exists with probability, say, .025
- ▶ Multiple endpoints increase the chance of deciding an ineffective treatment should be adopted:
  - ▶ This problem exists with either frequentist or Bayesian criteria for evidence
  - ▶ The actual inflation of the type I error depends on
    1. the number of multiple comparisons, and
    2. the correlation between the endpoints

SISCR - RCT, Day 2 - 2 : 3

## Choice of a Primary Outcome

### Multiple comparison issues

- ▶ Ex: Consider experiment-wise error rate when using level .05 per decision

Number Compared	Worst Case	Correlation				
		0.00	0.30	0.50	0.75	0.90
1	.050	.050	.050	.050	.050	.050
2	.100	.098	.095	.090	.081	.070
3	.150	.143	.137	.126	.104	.084
5	.250	.226	.208	.184	.138	.101
10	.500	.401	.353	.284	.193	.127
20	1.000	.642	.540	.420	.258	.154
50	1.000	.923	.806	.624	.353	.193

Choice of a Primary Outcome

### Validation of Surrogate Outcomes

Prentice's Criteria

SISCR - RCT, Day 2 - 2 : 5

### Primary endpoint: Clinical

- ▶ Should consider (in order of importance)
  - ▶ The most relevant clinical endpoint (Survival, quality of life)
  - ▶ The endpoint the treatment is most likely to affect
  - ▶ The endpoint that can be assessed most accurately and precisely

## Choice of a Primary Outcome

**SISCR**

### Validation of Surrogate Outcomes

Prentice's Criteria

SISCR - RCT, Day 2 - 2 : 6

### Additional Endpoints

- ▶ Other outcomes are then relegated to a “secondary” status
  - ▶ Supportive and confirmatory
  - ▶ Safety
- ▶ Some outcomes are considered “exploratory”
  - ▶ Subgroup effects
  - ▶ Effect modification

## Choice of a Primary Outcome

### Primary endpoint: Clinical

- ▶ Should consider (in order of importance)
  - ▶ The phase of study: What is current burden of proof?
  - ▶ The most relevant clinical endpoint (Survival, quality of life)
    - ▶ Proven surrogates for relevant clinical endpoint (????) More later...
  - ▶ The endpoint the treatment is most likely to affect
    - ▶ Therapies directed toward improving survival
    - ▶ Therapies directed toward decreasing AEs
  - ▶ The endpoint that can be assessed most accurately and precisely
    - ▶ Avoid unnecessarily highly invasive measurements
    - ▶ Avoid poorly reproducible endpoints

Validation of Surrogate Outcomes

Prentice's Criteria

SISCR - RCT, Day 2 - 2 : 7

## Choice of a Primary Outcome

### Multiple endpoints

- ▶ Sometimes we must consider multiple endpoints
- ▶ We then control experiment-wise error
- ▶ Possible methods include
  - ▶ Composite endpoint
    - ▶ AND: Individual success must satisfy all
    - ▶ OR: Individual success must only satisfy one
    - ▶ AVERAGE: Sum of individual scores
    - ▶ EARLIEST: e.g., event free survival
  - ▶ Co-primary endpoints
    - ▶ Must show improvement in treatment group on all endpoints
    - ▶ No guarantee that the same subjects are experiencing the improvement

**SISCR**

Validation of Surrogate Outcomes

Prentice's Criteria

SISCR - RCT, Day 2 - 2 : 8

## Choice of a Primary Outcome

**SISCR**  
UW - 2016

### Competing risks

- ▶ Occurrence of some “nuisance” event precludes observation of the event of greatest interest, because
  - ▶ Further observation impossible
    - ▶ E.g., death from CVD in cancer study
  - ▶ Further observation irrelevant
    - ▶ E.g., patient advances to other therapy (transplant)
- ▶ Methods
  - ▶ Event free survival: time to earliest event
  - ▶ Time to progression: censor competing risks
  - ▶ “U statistics”: define ranking based on both events

Choice of a Primary Outcome

Validation of Surrogate Outcomes

Prentice's Criteria

SISCR - RCT, Day 2 - 2 : 9

## Choice of a Primary Outcome

**SISCR**  
UW - 2016

### Competing risks caveats

- ▶ Competing risks produce missing data on the event of greatest interest
- ▶ As with all missing data problems, there is nothing in your data that can tell you whether your actions are appropriate
  - ▶ Are subjects with competing risk more or less likely to have event of interest?
  - ▶ (the term “competing risk” has become shorthand for a setting in which your results are in doubt)

Choice of a Primary Outcome

SISCR - RCT, Day 2 - 2 : 10

## Choice of a Primary Outcome

### Issues with clinical outcomes

- ▶ Goal of clinical trial is to establish whether an experimental treatment will prevent a particular clinical outcome
  - ▶ Incidence of disease
  - ▶ Decreased quality of life
  - ▶ Mortality
- ▶ Relevant clinical outcomes are often relatively rare events that occur after a significant delay
  - ▶ Believe that earlier interventions have greater chance of benefit
- ▶ It can also be logistically difficult to measure a clinical outcome
  - ▶ Quality of life needs to be assessed over a sufficiently long period of time

**SISCR**

HIV Meta-Analysis

CAST

CGD

Validation of Surrogate Outcomes

Prentice's Criteria

SISCR - RCT, Day 2 - 2 :11

## Choice of a Primary Outcome

### Impact on trial design

- ▶ Large sample size required to assess treatment effect on rare events
- ▶ Long period of follow-up needed to assess endpoints
- ▶ Isn't there something else that we can do?
- ▶ A tempting alternative is to move to "surrogate" endpoints...

**SISCR**

## Surrogate Endpoints

**SISCR**  
UW - 2016

### Motivation for surrogate endpoints

- ▶ Hypothesized role of surrogate endpoints
  - ▶ Find a biological endpoint which
    - ▶ can be measured in a shorter timeframe,
    - ▶ can be measured precisely, and
    - ▶ is predictive of the clinical outcome
  - ▶ Use of such an endpoint as the primary measure of treatment effect will result in more efficient trials

Validation of Surrogate Outcomes

Prentice's Criteria

SISCR - RCT, Day 2 - 2 :13

## Surrogate Endpoints

**SISCR**  
UW - 2016

### Identifying potential surrogates

- ▶ Typically use observational data to find risk factors for clinical outcome
- ▶ Treatments attempt to intervene on those risk factors
- ▶ Surrogate endpoint for the treatment effect is then a change in the risk factor

Choice of a Primary Outcome

SISCR - RCT, Day 2 - 2 :14

## Surrogate Endpoints

**SISCR**  
UW - 2016

### Examples of surrogates

- ▶ Colon cancer prevention
  - ▶ Two-fold increase in risk of colon cancer for patients with adenomatous colon polyps
  - ▶ Prevention directed toward preventing colon polyps
  - ▶ Treatment effect measured by decreased incidence of colon polyps
  - ▶ True clinical outcome is preventing mortality

Choice of a Primary Outcome

Clinical Endpoints  
Multiple Endpoints and Competing Risks

Prentice's Criteria

SISCR - RCT, Day 2 - 2 :15

## Surrogate Endpoints

**SISCR**  
UW - 2016

### Examples of surrogates

- ▶ HIV/AIDS
  - ▶ HIV leads to suppression of CD4 cells
  - ▶ Decreased CD4 levels correlates with development of AIDS
  - ▶ Treatment effects measured by following CD4 counts
  - ▶ True clinical outcome is prevention of morbidity and mortality

Choice of a Primary Outcome

SISCR - RCT, Day 2 - 2 :18

## Surrogate Endpoints

### Examples of surrogates

- ▶ Other examples that have been used historically include
  - ▶ Cancer: tumor shrinkage
  - ▶ Coronary heart disease: cholesterol, nonfatal MI, blood pressure
  - ▶ Congestive heart failure: cardiac output
  - ▶ Arrhythmia: atrial fibrillation
  - ▶ Osteoporosis: bone mineral density
- ▶ Future surrogates?
  - ▶ Gene expression
  - ▶ Proteomics

**SISCR**

Alternate Pathways

Surrogate Markers

Examples Revisited

HIV Meta-Analysis

CAST

CGD

Validation of Surrogate Outcomes

Prentice's Criteria

SISCR - RCT, Day 2 - 2 :19

## Surrogate Endpoints

### Problem with surrogates

- ▶ Establishing biologic activity does not always translate into effects on the clinical outcome
- ▶ May be treating the symptom, not the disease
  - ▶ Concorde: ZDV improves CD4, not survival
  - ▶ CAST: encainide, flecainide prevents arrhythmias, worsens survival
- ▶ May be missing effect through other pathways
  - ▶ Intl CGD group: Gamma-INF no affect on biomarkers, decreases serious infections

**SISCR**

SISCR - RCT, Day 2 - 2 :21

## Examples of Problems with Surrogate Endpoints

**SISCR**  
UW - 2016

### Ex: Concorde Trial (Lancet, 1993)

- ▶ Observed CD4 changes
- ▶ 3 mos relative to baseline
  - ▶ Immediate ZDV: +20 cells
  - ▶ Placebo: -10 cells
- ▶ Difference between treatment arms
  - ▶ 3 mos: 30 cells (P < .0001)
  - ▶ 6 mos: 35 cells (P < .0001)
  - ▶ 9 mos: 32 cells (P < .0001)

Choice of a Primary Outcome

Alternate Pathways  
Surrogate Markers  
Examples Revisited  
HIV Meta-Analysis  
CAST  
CGD

Validation of Surrogate Outcomes

Prentice's Criteria

SISCR - RCT, Day 2 - 2 :22

## Examples of Problems with Surrogate Endpoints

### Ex: Concorde Trial (Lancet, 1993)

- However, more deaths observed on ZDV arm with roughly equal 3-year survival rate

	ZDV (n = 877)	Placebo (n = 872)
AIDS / Death	175	171
Death	95	76
3 year survival	92%	93%

"Results cast doubt on the value of using changes over time in CD4 count as a predictive measure for effects of antiviral therapy on disease progression and survival."

### Validation of Surrogate Outcomes

Prentice's Criteria

## Validation of Surrogate Outcomes

### Can we validate a surrogate endpoint?

- ▶ Many proposed fixes for surrogate outcomes revolve around “validation” of particular surrogate outcomes
  - ▶ This is generally very difficult to do
- ▶ Is there a way to validate a surrogate endpoint by establishing which causal pathway holds?
- ▶ What doesn't work...
  - ▶ It is not sufficient to establish that the surrogate endpoint predicts the clinical outcome in each treatment group separately
  - ▶ Treatment can affect the distribution of the surrogate endpoint while increasing mortality in every level

### Choice of a Primary Outcome

Clinical Endpoints  
Multiple Endpoints and Competing Risks

### Surrogate Endpoints

Motivation and Examples  
Examples of Problems with Surrogates  
Ideal Surrogate  
Alternate Pathways

Examples Revisited  
HIV Meta-Analysis  
CAST  
CGD

### Validation of Surrogate Outcomes

Prentice's Criteria

## Validation of Surrogate Outcomes

**SISCR**  
UW - 2016

### What doesn't work...

- Consider the following hypothetical example

Surrogate	Treatment		Control	
	n	% die	n	% die
Low	30	50%	10	30%
Medium	40	60%	30	40%
High	30	70%	60	50%
Total	100	60%	100	45%

CGD

Validation of Surrogate Outcomes

Prentice's Criteria

SISCR - RCT, Day 2 - 2 :50

## Validation of Surrogate Outcomes

**SISCR**  
UW - 2016

### Prentice's Criteria (SIM, 1989)

- ▶ To be a direct substitute for a clinical benefit endpoint on inferences of superiority and inferiority
  - ▶ The surrogate endpoint must be correlated with the clinical outcome
  - ▶ The surrogate endpoint must fully capture the net effect of treatment on the clinical outcome

Choice of a Primary Outcome

Clinical Endpoints  
Multiple Endpoints and Competing Risks

Surrogate Endpoints

Motivation and Examples  
Examples of Problems with Surrogates

Ideal Surrogate  
Alternate Pathways  
Surrogate Markers  
Examples Revisited  
HIV Meta-Analysis  
CAST  
CGD

Validation of Surrogate Outcomes

Prentice's Criteria

SISCR - RCT, Day 2 - 2 :51

## Validation of Surrogate Outcomes

**SISCR**  
UW - 2016

### Does Not Satisfy Criterion

- ▶ Treatment has no effect on Clinical Outcome

Choice of a Primary Outcome

Clinical Endpoints  
Multiple Endpoints and Competing Risks

Surrogate Endpoints

Motivation and Examples  
Examples of Problems with Surrogates

Ideal Surrogate  
Alternate Pathways

CAST  
CGD

Validation of Surrogate Outcomes

Prentice's Criteria

SISCR - RCT, Day 2 - 2 :55

## Validation of Surrogate Outcomes

**SISCR**  
UW - 2016

### What is the implication?

- ▶ The validity of a surrogate endpoint is dependent upon
  1. the disease
  2. the clinical outcome
  3. the treatment
- ▶ Thus it is not possible to validate a surrogate endpoint for every combination of treatment and disease without doing a trial looking at the clinical outcome

Choice of a Primary Outcome

Clinical Endpoints  
Multiple Endpoints and Competing Risks

Surrogate Endpoints

Motivation and Examples  
Examples of Problems with Surrogates

Ideal Surrogate  
Alternate Pathways  
Surrogate Markers  
Examples Revisited  
HIV Meta-Analysis  
CAST  
CGD

Validation of Surrogate Outcomes

Prentice's Criteria

SISCR - RCT, Day 2 - 2 :56

### What is the implication?

- ▶ When considering a number of treatments that can be presumed to act in a similar manner, meta-analyses of clinical trial results can sometimes be used to establish the suitability of a surrogate endpoint for other treatments in that class
  - ▶ Even then, we must watch for outliers within such a meta-analysis
  - ▶ Such outliers suggest that the presumption of similar action is violated

Choice of a Primary Outcome

Clinical Endpoints  
Multiple Endpoints and Competing Risks

Surrogate Endpoints

Motivation and Examples  
Examples of Problems with Surrogates

Ideal Surrogate  
Alternate Pathways  
Surrogate Markers

Examples Revisited  
HIV Meta-Analysis

CAST  
CGD

Validation of Surrogate Outcomes

Prentice's Criteria

SISCR - RCT, Day 2 - 2 :57

### At the end of the day

- ▶ Surrogate endpoints have a place in screening trials where the major interest is identifying treatments which have little chance of working
- ▶ But for confirmatory trials meant to establish beneficial clinical effects of treatments, use of surrogate endpoints can (AND HAS) led to the introduction of harmful treatments
