The course structure is as follows:

Instructors: Tom Britton and Ira Longini
TA (instructor for R-sessions): Dongni Zhang

Each lecture has a pre-recorded lecture on the module web-page (the corresponding slides are also available in pdf-format). It is highly recommended that participants view the lecture before the corresponding live meeting on ZOOM. This meeting is live, and participants are encouraged to pose questions either before the lecture (in Slack) or during the live meeting which, besides clarifying questions, will also provide examples and additional information. The instructors will describe their experiences with application of the material during the live sessions, and active participation will be encouraged. The live sessions are recorded, and will also appear on the module web-page after the end of each live-session.

The course has two R-sessions, where course participants will be guided through exercises. Please follow the R installation instructions on the module website before the course. The exercises are available on the module webpage and the corresponding solutions containing codes will also appear on the module website after the end of each R-session.

The pre-recordings will all appear at least 24 hours prior to the corresponding live session.
