July 2022

Contents of this Lab

- 1 Computing an ATE using the G-computation and IPTW formulas by hand

The G-computation and IPTW identification formulas

For the population described in the table below, calculate $E(Y | A = a)$ and $E[Y(a)]$ corresponding to treatment ($a = 1$) and control ($a = 0$) using:

- (i) the G-computation formula;
- (ii) the IPTW formula.

(Green and orange values provide counts of individuals with $Y = 1$ and $Y = 0$, resp.)

	$W = 0$	$W = 1$	$W = 2$	
$A = 1$	20 + 12	49 + 11	89 + 7	
$A = 0$	94 + 34	30 + 30	6 + 18
